# Product Bin and Labeling Definitions

## Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point and forward voltage.

LUXEON FlipChip White LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

Where:

### A B C D

- A** - designates luminous flux bin (example: B=55 to 60 lumens, C=60 to 65 lumens for LUXEON FlipChip White 05)
- B C** - designates color bin (example: 30, AA, AB, AC, AD, 5A, 5B, 5C or 5D for 70CRI parts)
- D** - designates forward voltage bin (example: Q=2.50 to 2.75V, R=2.75 to 3.00V)

Therefore, a LUXEON FlipChip White 05 with a lumen range of 55 to 60, color bin of 5C and a forward voltage range of 2.50 to 2.75V has the following CAT code:

### B 5 C Q

## Luminous Flux Bins

Table 5 lists the standard photometric luminous flux bins for LUXEON FlipChip White emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.
